SUMMARY

AI Product Owner and Senior Product Manager with 15+ years driving product vision, roadmap prioritization, and cross-functional collaboration in AI, automotive, and telecom software. Proven track record translating complex AI capabilities into user-focused solutions that deliver measurable results. As Product Owner in Agile/Scrum teams, I have led requirement gathering, backlog management, and stakeholder alignment for AI-driven systems, embedded platforms, and Android Automotive. Strong technical foundation in Python, machine learning, NLP, and microservices architecture. Data-driven approach with sharp eye for product metrics and user impact.

SKILLS

Domain Knowledge

AUTOSAR,
Android Automotive,
Telecom 3GPP Standards

DevOps & Tools

Docker, Kubernetes, Jenkins,
CI/CD, Git, Linux, Jira,
Confluence,
Microsoft Project, Atlassian,
Trello

Software Development & Programming

C++, CMake, Python,
Embedded Systems,
Design Patterns,
microservices,
Domain Driven Design

AI & Machine Learning

NLP, Speech recognition,
Ontology generation,
Machine Learning,
AI Product Lifecycle,
Data-driven Products

WORK EXPERIENCE

Jan 2022 - Current

Senior Consultant / Software Architect at MM Consulting

- Coach and guide clients in developing and revising software architectures to ensure long-term platform reusability
- Collaborate with client architects and C-level leadership to align software, hardware, and mechanical design strategies
- Challenge conventional approaches by asking critical questions to drive cross-disciplinary alignment
- Facilitate defining and integrating business goals into architectural planning and execution
- Lead stakeholder review sessions and product demos to inspire action and win buy-in

Jan 2020 - Jan 2022

Product Owner at Semcon / DXC Technology

DXC Technology Automotive Line of Business provides software solutions for automotive OEMs and Tier 1 suppliers. Our team of 60-members, Service Layer, supplies the Android Automotive stack for in-vehicle-infotainment (IVI).

- Product Owner for Service Layer, Audio, Radio, Media, and voice control modules - owning the product story from idea to release
- Crafted product visions and roadmaps, turning possibilities into clear, actionable requirements and prioritised backlogs
- Partnered with engineers and designers to deliver features users love using Agile/Scrum methodology
- Led and coordinated three development teams and third-party suppliers through entire product lifecycle
- Tracked performance metrics, spotted opportunities, and pivoted fast to maximise value
- Led product demos, retrospectives, and stakeholder review sessions that inspire action
- Proactively identified and resolved blockers to ensure smooth project execution

Jan 2019 - Jan 2020

Senior Software Engineer at Semcon / Yeti Move

Yeti Move delivers autonomous technology and cloud-based fleet management, starting with self-driving snow ploughs for airports and expanding to heavy machinery solutions. We hold major global contracts, including autonomous snow removal for Swedavia airports.

- Designed, implemented, and maintained the equipment control components as component owner
- Facilitated communication between the server, PLC components, and autonomous decision-making systems
- Translated business logic between cloud servers and PLCs, ensuring accurate updates from sensors
- Refactored the component from the ground up, incorporating state machines, communication layers, and fail-safe mechanisms
- Managed a comprehensive fleet management solution, including user portal, cloud server, and embedded systems
- Responsible for commercialization and commissioning of the solution in the field

Jan 2018 - Jan 2019

Senior Software Engineer - AI Virtual Assistant at Semcon

Developed an AI-driven virtual assistant for natural language information retrieval, similar to Google Home and Alexa - translating deep tech into compelling user experiences.

- Partnered with data scientists on AI pipelines, ML model integration, and data-driven product development
- Built a microservice architecture with backend components and communication managed in Python
- Integration and customization of speech recognition system using Mozilla's DeepSpeech
- Created ontology generation and retrieval processes using Stanford NLP and sequence-to-sequence models
- Translated complex AI capabilities into elegant, user-focused solutions that deliver measurable results

Jan 2012 - Jan 2018

Senior Software Engineer (L6) / Product Owner at Ericsson

Ericsson, Packet Core (EPC 4g/5g) provides internet backbone and core network functionality for mobile communications.

- From 2012 to 2018, I held diverse roles at Ericsson, contributing to software development, team leadership, and tool implementation to optimize processes
- Enhanced mini-link product efficiency by introducing tools like profilers and IWYU (Include What You Use)
- Migrated and refactored legacy Rhapsody code to C++
- Managed the full software development lifecycle for the PDN Gateway node
- Worked directly with clients such as Verizon as part of professional services teams
- Led functional testing, QA coordination, and CI/CD tooling improvements as lead engineer and acting product owner, with solutions adopted by 300+ developers
- Delivered Agile/Scrum coaching and software design training internationally for Session Gateway in China

Jan 2011 - Jan 2012

Research Engineer at Volvo Trucks

Volvo Trucks, Advanced Technology & Research

- Developed a predictive model for assessing speedup gains when migrating software from single-core to multicore platforms
- Conducted empirical measurements of inter-core and intra-core communication times within AUTOSAR environments
- Evaluated the impact of cross-core communication overhead on system performance

EDUCATION

2010 - 2012

Master Computer Science at Chalmers University of Technology

CERTIFICATES

May 2021

Machine Learning Specialization

DeepLearning.AI
